PROFESSIONAL SUMMARY

A 4th-year Computer Science student at Pampanga State University with hands-on experience building and deploying full-stack web and mobile applications across real-world and academic engagements. Experienced in mobile development using Flutter, backend development with PHP and Python, and machine learning. Proven ability to deliver under professional contracts, having developed and deployed a commercial Android application for a paying business client. Passionate about using technology to solve meaningful problems in education, tourism, and community development.

EDUCATION

Pampanga State University — Bacolor, Pampanga

Bachelor of Science in Computer Science

Expected Graduation: Aug 2027

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Database Systems, Web Development, Operating Systems, Computer Networks

TECHNICAL SKILLS

Languages: HTML, CSS, Javascript, Python, C++, Dart, PHP, SQL, Java, Visual Basic, Scratch

Frameworks & Libraries: Flutter

Database : MySQL, SQLite, PostgreSQL, Firebase

Developer Tools: Git, GitHub, VS Code, Docker, Antigravity

Operating Systems: Linux, Windows

Networking & Hardware: Cisco Packet Tracer, Micro:bit, Arduino

SOFT SKILLS

- | | |
|--------------------------|------------------------|
| ● Leadership | ● Community Outreach |
| ● Teamwork | ● Public Speaking |
| ● Critical Thinking | ● Attention to Detail |
| ● Requirements Gathering | ● Adaptability |
| ● Technical Facilitation | ● Client Communication |

PROJECTS

SANT:IO — Flutter, Supabase, PostgreSQL, Python, FastAPI (*In Progress, Expected: [Sept 2026]*)

- Developing a tourism discovery platform for Central Luzon in partnership with provincial and regional Department of Tourism offices, featuring a swipe-based destination recommendation engine, browsable catalogue with filtering, itinerary generation, and a user review and rating system.
- Engineered and personally trained a machine learning recommendation model in Python that powers destination suggestions based on user preferences and liked places, with a FastAPI backend serving the model as a REST API deployed on a VPS.

- Building a three-platform ecosystem alongside the mobile app — a destination management portal for business owners and attraction managers, and a DOT admin dashboard for each province to approve and oversee destination listings.

Carlos Fitness Membership Management System — Flutter, Firebase, SQLite, Git

- Engineered a dual-app Android solution for a paying business client acquired through a Software Engineering course, following formal requirements gathering, documentation, and software development lifecycle practices.
- Developed a tablet-based gym management app for staff to handle full CRUD operations on memberships, digitizing a previously paper-based system, and a companion member-facing app that displays membership status and serves as a digital gym ID.
- Implemented a hybrid offline-first database architecture using Firebase Firestore for cloud-based member data sync and SQLite for local storage, ensuring full app functionality during internet outages.

Hirenorian — HTML, CSS, JavaScript, Tailwind CSS, PHP, MySQL, VPS, Docker, Git

- Engineered a multi-tiered platform for Pampanga State University matching students with partner OJT/Internship opportunities, simulating industrial job portals like JobStreet.
- Developed an administrative dashboard allowing university staff to monitor real-time application tracking and metrics, alongside a portal for external companies to manage postings and corporate profiles.
- Architected and secure-coded backend PHP APIs integrated with a MySQL database to handle relational data across three distinct user access control levels.
- Orchestrated full-stack application deployment on a Virtual Private Server (VPS) utilizing Dokploy for automated container management and website deployment.

BiteWise Calorie Tracker — Basic4Android (B4A), SQLite

- Built a fully offline Android diet tracking application that allows users to log daily meals, monitor caloric intake, browse a searchable food and beverage database, and review consumption history over time.
- Designed and implemented a local SQLite database schema to efficiently store and query user meal logs, food entries, and historical tracking data entirely on-device with no internet dependency.
- Structured the application using modular, event-driven programming patterns native to the Basic4Android framework, separating UI logic, database operations, and calorie calculation into distinct components for maintainability.

ADDITIONAL EXPERIENCE / CERTIFICATIONS

- **Associate Lead Learner & Volunteer**, DEVCON Kids Pampanga — Facilitated 2 code camps teaching robotics and programming to young learners using Micro:bit, and attended workshops. (2025 – Present)
- **AI Ready ASEAN Certificate of Completion**, ASEAN Foundation / Google.org — Completed all 15 AI learning modules covering Generative AI, AI Ethics, Data Privacy, and AI tool development. (May 2026)
- **Programming with Python**, Simplilearn — Completed structured Python programming course. (December 2025)
- **Lead Learner Workshop Certificate**, DEVCON Kids Pampanga Chapter (February 2026)
